TECHNICAL SKILLS

Languages: Python [Advanced], C++ [Intermediate], Java [Basic], Dart, JavaScript

Frontend: HTML, CSS, React.js, Next.js, Tailwind CSS

Backend: Node.js, Express.js, REST APIs, Axios, JWT, bcrypt, Zod

Databases: MongoDB, PostgreSQL, MySQL, Prisma ORM, Cloud Firestore

Tools / Frameworks / Libraries / Version Control: Flutter, Firebase, Docker, Git, GitHub, Postman, Vitest, Razorpay

PERSONAL STATEMENT

Backend-focused Computer Science undergraduate skilled in Node.js, Express.js, PostgreSQL, Prisma, and Firebase, with a strong grounding in authentication, database design, and API architecture. Built and shipped a full-stack recharge simulation platform, owning transaction-state design, schema validation, and idempotent request handling end-to-end. Seeking a backend/full-stack internship to contribute to scalable APIs, data-intensive services, and system architecture while deepening my system design and scalability skills through hands-on engineering work.

PROJECTS

SchoolSync | GitHub Repo | Live Demo

July 2026 – August 2026

Collaborated with a team of 3 to build a Flutter-based district monitoring application; owned the Firestore data architecture and access-control layer, enabling district officers to track attendance, fee collection, and examination data across multiple schools in real time.

- **Tech Stack and Frameworks Used:** Flutter, Dart, Firebase Authentication, Cloud Firestore, Firebase Security Rules, and FlutterFire CLI.
- **Problem Solved / Use Case:** Replaces manual, school-by-school tracking with a single centralized dashboard for district-level attendance, fee, and exam oversight.
- **Challenges Tackled / Learning Outcome:** Designed district-based data segregation and configured Firebase Security Rules to enforce authenticated, role-based access control.

Paytm Recharge System | GitHub Repo | Live Demo

June 2026 – July 2026

Collaborated with a team of 3 to build a full-stack recharge simulation platform; owned the transaction-state backend, processing mobile recharges and tracking status through a structured workflow.

- **Tech Stack and Frameworks Used:** Next.js, React.js, Prisma ORM, PostgreSQL, Axios, Zod, Razorpay Test Mode, JWT authentication, Docker.
- **Problem Solved / Use Case:** Simulates a real-world recharge workflow with operator selection, schema-based validation, and polling-based status tracking across PENDING, SUCCESS, and FAILED states.
- **Challenges Tackled / Learning Outcome:** Prevented duplicate transaction requests using a 10-second idempotency window and strengthened request integrity through Zod validation.

GitHub Profile Analyzer | GitHub Repo

Feb 2026

Developed a full-stack dashboard that retrieves and visualizes GitHub profile information through an interactive web interface for profile analysis.

- **Tech Stack and Frameworks Used:** React.js, Node.js, Express.js, MongoDB, REST APIs, CSS.
- **Problem Solved / Use Case:** Helps developers and recruiters quickly review a GitHub profile's activity and repository data without manually browsing GitHub.
- **Challenges Tackled / Learning Outcome:** Strengthened understanding of full-stack architecture and REST API integration through structured frontend-backend communication workflows.

EDUCATION ENROLLMENT

Kalvium's UG program in CS (Software Product Engineering)

2025 – 29

Campus: Gurugram | Bachelor's enrollment: *B.Tech*, SGT University

ACHIEVEMENTS & EXTRACURRICULARS

- **Technical Contributions:** Maintained an active GitHub profile featuring multiple full-stack, backend, and mobile software engineering projects.
- **Technical Contributions:** Completed 5+ LearnTube technical certifications, demonstrating proficiency across key technical domains; — View Certificates.
- Solved 50+ Data Structures and Algorithms problems, actively building problem-solving proficiency using Python.
