

# Student Resume Guidelines

## Section A: How to Prepare and Submit Your Resume

### 1. File Format and Naming Convention

- The resume should be an edited file created using the direct copy of the [Resume Template](#) shared.
- Resumes must not contain any personal contact details such as phone numbers or email addresses.
- The resume must be free from typographical or grammatical errors.
- The file must be named in the format: **FullName.pdf** (e.g., **John\_Doe.pdf**).
- Files named as **Resume(1).pdf**, containing email IDs, or using default download names should be renamed before being updated in the database.

### 2. Font & Formatting

The resume should follow the font and formatting style as standard protocol,

**Font:** Roboto Serif

**Font Size:** Student Name – 14 pt; all other text – 10 pt

**Line Spacing:** 1.15 with no spacing before or after paragraphs

**Alignment:** All text justified; only “Month and Year” entries should be left-aligned

**Line Usage:** Avoid half lines — write complete, meaningful sentences that utilize full line space.

**Header:** 1 cm away from the top

**Footer:** 1 cm away from the bottom

**Avoid writing vague or incomplete lines like:**

Eg. Developed a UI/UX interface

**Instead, write complete and impact-oriented statements like:**

Eg. Developed a responsive UI/UX interface that integrated seamlessly with backend and the database, enhancing user experience & reducing navigation time by 30%.

### 3. Header Section

- Students' full name should use a sentence case (e.g., *John Doe*), not all caps.
- LinkedIn and GitHub are mandatory and must be working hyperlinks.

- Usernames on portfolio platforms should be professional and identifiable (e.g., avoid `coderX23`, `h4ck3rm0d3`).

### 3.1 Inclusion Criteria - Optional Portfolio and Repository that can be added to the Header

| Platform         | Include If                                                       | Exclude If                              | Do Not Add If                                   |
|------------------|------------------------------------------------------------------|-----------------------------------------|-------------------------------------------------|
| LeetCode         | 100+ problems solved, active contest history                     | Fewer than 30 problems solved           | Inactive profile for 3+ months                  |
| Figma            | Full case studies with end-to-end UI/UX flow                     | Static screens or UI kits               | No design rationale or user flows               |
| Behance          | At least one complete project with visuals and detailed write-up | Incomplete drafts or image-only posts   | No published projects                           |
| Personal Website | Aggregates resume, GitHub, blog; clear, clean layout             | Under construction, placeholders        | Not updated in over 6 months                    |
| Blogs            | 2+ original technical blog posts in last 3–6 months              | Reposts, low-quality, or sparse content | No original content or inactive beyond 6 months |

## 4. Technical Skills

- Skills should be listed in the following format:

#### TECHNICAL SKILLS

**Languages:** Language [Proficiency], based on Kalvium Dojo Belt Levels

Example: Python [Advanced], JavaScript [Intermediate], C++ [Basic]

Level Indicators - DOJO - 1 to 3 Basic ; DOJO - 4 & 5 Intermediate ; DOJO - 6 Advanced

**Frontend:** [Tech stacks known]

**Backend:** [Tech stacks known]

**Databases:** [Tech stacks known]

**Tools / Frameworks / Libraries / Version Control /Operating Systems /API Technologies** [Only include if you've applied in a project or work context]

- Skill levels should reflect your actual proficiency based on the DOJO for the languages [**Level Indicators - DOJO - 1 to 3 Basic ; DOJO - 4 & 5 Intermediate ; DOJO - 6 Advanced**] and the other stacks should be added only when the student has hands-on experience with the same.

## 5. Personal Statement

The personal statement should answer the questions -

- Who are you technical? [What technical strengths, tools, or areas define you best?]
- Where have you added value before ? [Briefly highlight one impactful project or internship and what you contributed]
- Why are you seeking an internship? [What do you aim to learn, contribute, or become through this opportunity?]
- Keep it sharp, relevant, and 3–5 lines max.
- Must be clear, relevant, and specific to the student.
- Avoid vague, exaggerated, or generic statements.

## 6. Experience

- List **work experiences** in reverse chronological order - most recent first, followed by **their 1 best** project
- Students with no work experience can skip this section

### EXPERIENCE

| Company Name   Role                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Month yr – Month Yr |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| What you did: Start with an action verb (e.g., “Built”, “Developed”, “Integrated”, “Collaborated”) – focus on your core task/goal. (not more than 2 lines)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                     |
| <ul style="list-style-type: none"> <li>• <b>Technology used:</b> What tools, languages, frameworks, or platforms did you apply effectively? (not more than 2 lines)</li> <li>• <b>Impact delivered:</b> What changed because of your work? Numbers, timelines, quality improvements. (not more than 2 lines)</li> <li>• <b>Recognitions or Highlights:</b> Did your feature go live? Was it adopted by users or teams? Got appreciation? (not more than 2 lines)</li> <li>• <b>Key Learnings:</b> What skill, value, or insight did you take away? (not more than 2 lines and should not be a repetition from technology used)</li> </ul> |                     |

**Note:** [Students can add all the work experience that are part of the Kalvium work integration program and add only applicable bullet points called out above, if no data or valid statement present refrain from adding the same]

## 7. Projects

- Students with work experience can add only one of their best project
- Students with no work experience can add a minimum of 2 and a maximum of 3 projects
- Students to add only applicable bullet points called out in the image below, if no data or valid statement present refrain from adding the same

## PROJECTS

**Github Project Title | Github Repo Link**

**Month yr – Month Yr**

What you did: Start with an action verb (e.g., “Built”, “Developed”, “Integrated”, “Collaborated”) – focus on your core task/goal. (not more than 2 lines)

- **Tech Stack and Frameworks used:** Highlight full stack used, and any dev tools, APIs, or integrations. (not more than 2 lines)
- **Problem Solved / Use Case:** What is the real-world relevance of the project? Who might use it? (not more than 2 lines)
- **Impact / Usage (if any):** Any real-world use? Peer/community usage and comments / feedback received?(not more than 2 lines)
- **Challenges Tackled / Learning Outcome:** Technical or team-related learnings, debug challenges, or architectural insights.(not more than 2 lines)

**Note:** [Students with work experience can add their best project and students with no work experience can add a minimum of 2 and a maximum of 3 projects and add only applicable bullet points called out above, if no data or valid statement present refrain from adding the same]

### Additional Guidelines for Experience and Projects:

- Bullet points must be 1–2 lines long
- All project links must be hyperlinked (repo and deploy).
- Dates and durations must be accurate and up to date.

## 8. Education Section

- Ensure the university name is mentioned as per the official website.
- Format should follow,

### EDUCATION ENROLLMENT

**Kalvium's UG program in CS (Software Product Engineering)**

**20xx-xx**

Campus: Campus Location | Bachelor's enrollment: BCA, University Name / B.Tech, University Name

- Graduation year must be accurately stated.

## 9. Achievements / Certifications

May include only when applicable and valid proofs present but not restricted to:

- **Hackathons & Competitions:** Mention any wins, finalist positions, or notable performances in coding contests, hackathons, or tech events.
- **Technical Contributions:** Include open-source involvement, community engagement, or published blog posts with technical value.
- **Campus Engagement / Leadership:** Any clubs, event organizing roles, or mentoring roles worth highlighting.
- **Personal Interests (Optional but thoughtful):** Only include hobbies that show initiative, discipline, creativity, or depth.

Proofs that are to be submitted by students for verification,

- **Hackathons & Competitions:** Certificate, official email confirmation, leaderboard screenshot, or event result page
- **Technical Contributions:** GitHub link (merged PR), blog URL, open-source profile (e.g., GitHub profile with contribution graph)
- **Campus Engagement / Leadership:** Screenshot of internal comms, team listing, program schedule with your name, or testimonial from organizing head
- **Personal Interests (Optional but thoughtful):** If any present, provide blogs, podcasts, participation in competitions/events, portfolios, videos, or certificates

How to add the proof for verification,

- Students should hyperlink the sources or drive links of certificates with public view access for verification and if no proof is submitted for **Hackathons & Competitions & Technical Contributions** they shall not be added to the resume.

## 10. Tools to Aid Resume Review

- [Resume Worded](#) : Tool for evaluating resume format, keyword alignment, and clarity. A minimum score of **80** is recommended.
- [AI Prompt-Based Review](#): An additional tool for in-depth evaluation using AI. Useful when Resume Worded's free tier doesn't offer enough insights. Campus Managers may feel free to suggest any changes to improvise the prompt.

## Section B: Resume submission and Future Updates

### 1. 1st time Resume Submission

- Resume must be submitted via the Resume Submission Form
- Ensure your resume is in pdf format and named as **FullName.pdf** (e.g., *Riya\_Patel.pdf*)
- Before submission, mark all required checkboxes in the submission form to confirm you've followed the resume guidelines.

#### If Approved:

- You'll receive an email confirmation from your Campus Manager stating that your resume has been approved and added to the placement database.

**If Rejected:**

- You will get an email listing the red flags and revision instructions.
- You must reply to that email with your corrected PDF resume within 24 hours.
- If approved, your resume will be added to the database.
- If still not approved, the feedback cycle will continue until final approval.

**2. Future Resume Submission (Updates)****2.1 When Can You Submit an Updated Resume?**

You may update your resume when:

- You complete a new project
- You earn a certification or award
- You achieve a notable academic or professional milestone

**2.2 Submission Timelines & Process**

- Resume Submission Form opens every Friday (9 AM – 6 PM) for updates.
- Campus Managers will review all updated resumes on Saturday (9 AM – 6 PM).

**If Approved:**

You will receive an email confirming that your updated resume has been reviewed and is updated in the database.

**If Rejected:**

- You'll get an email with feedback by Saturday 6 PM.
- You must reply with your corrected resume by Monday 6 PM.
- If approved after rechecking, your resume will be updated in the database by Tuesday 6 PM.
- If still not approved, you'll have to wait for the next Friday submission window.
